EFFICIENT AND SUSTAINABLE WITH **IMS-SOLAR**

A durable inlay system that does not put pressure on solar panels. Quick and easy to install.

Efficient and sustainable with IMS-Solar

IMS-Solar BV is an internationally operating producer of a sustainable mounting system for solar panels, which can be applied to a corrugated roof, steel roof or tiled roof. The system does not put any pressure on the solar panels and is quick and easy to install.

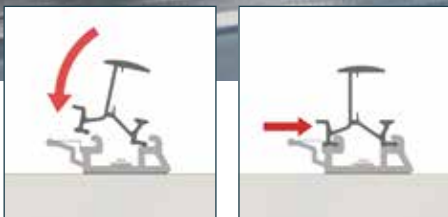

IMS-Solar BV advises and supplies good solutions throughout Europe; a mounting system that contributes to a longer lifespan of solar panels. Due to the strong basic structure of our system, horizontal lengths of up to 165 cm can be spanned. This saves time and costs.

IMS-Solar BV continues to develop the system and regularly gives presentations and trainings. Our technical people are happy to provide support and personal advice about our solar energy solutions. In this way we keep the installers as well informed as possible, so that they in turn can provide their customers with the best possible service.

1. Solar panel mounting system

The IMS-Solar system can be used on corrugated roofs, steel roofs and tiled roofs. We are developing an in-roof system and a flat roof construction that will follow shortly.

Why prefer installing solar panels with IMS-Solar instead of using clamps?

- No damage to the glass of the solar panels.
- Prevents micro-cracks on the solar panels.
- No continuous pressure.
- The solar panels provide more Wp per m².
- Prevents delamination between the layers of the solar panel.
- Better distribution of weight on the roof.

2. Environmentally conscious installing solar panels

Based on years of experience, IMS-Solar BV has developed a sustainable and environmentally conscious installation system. Reuse of aluminum forms the basis of the IMS-Solar mounting system. This not only creates environmentally conscious solar energy; the solar panels are also installed sustainably through our system. **We are original in that!**

3. The service of IMS-Solar

Support and advice

As an installer, you can easily calculate the optimal layout of the available space on the roof with our drawing and calculation program. We immediately provide a product and price list for the necessary installation materials and a professional presentation of the setup to the customer.

We regularly provide training courses to keep our skilled installers well informed about our products and the latest developments.

Quality

IMS-Solar BV only supplies top quality. Our material forms the basis for the safe installation of solar panels. Many static calculations have been made to comply with the NEN standards. The TÜV will be involved in the formal approvals. A 20 year warranty therefore is self-evident!

Seminars

Visit one of our seminars or work-outs and learn how to install the IMS-Solar system quickly and efficiently. In our office in Alkmaar we have demo units of different types of roofs; this gives us the opportunity to demonstrate how the system works. Also, we will provide trainings at various locations throughout the country.

Through webinars, IMS-Solar BV explains step by step how the installation and calculation program works; you will be provided an easy overview of the required installation material and the costs. We will also provide clear drawings which you can download and professionally present to your client.

More information

On the website you will find more information about our product, our suppliers and our services. Of course you can always contact us by mail or telephone for more information.
